P28 proteins are encoded by a 28kDa outer membrane protein multigene family. P28 proteins are useful as a vaccine against E.chaffeensis. DNA encoding P28 is useful for transfecting a host cell. A&U73420 represent Ehrlichia chaffeensis P28 outer membrane proteins of the invention

The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of nucleotide 99 through nucleotide 672 of ADA09764. Also disclosed are E. canis and E. chaffeensis outer membrane proteins and their encoding nucleic acids. The polynucleotides are useful for producing E. canis or E. chaffeensis outer membrane protein, for designing hybridisation probes for isolating and identifying cDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (Rocky mountain spotted fever) or canine ehrlichiosis. The present sequence represents an E. canis outer membrane protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis used in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeenis. This sequence represents an Ehrlichia outer membrane protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleic acid sequences encoding outer membrane proteins (OMP) of Erlichia chaffeensis (designated as OMP proteins) and Ehrlichia canis (designated as P30F proteins). The OMP polymucleotide is useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia canis P30F protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ehrlichia

                                                                                                                                                                                                                                                  166
                                                                                                                                                                                                                                                                                                                                                  225
                                                                                                                                                                                                                                                                                                                                                                                 The invention provides isolated outer membrane proteins (OMP) from Barlichia chafeensis and E. canis. The E. chaffeensis proteins form part of the CMP family and consist of proteins CMP-1, -1(B to Z) shown in AAY06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAY06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs. (Updated on 27-AUG-2003 to correct OS fleid.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ehrlichia

The invention relates to isolated and purified 28-kDa outer membrane proteins (P28-1 to P28-21) of Ehrlichia chaffeensis. P28 proteins are encoded by a 28kDa outer membrane protein multighene family. P28 proteins are useful as a vaccine against E.chaffeensis. DNA encoding P28 is useful for transfecting a host cell. ABUT3400-AAUT3420 represent Ehrlichia chaffeensis P28 outer membrane proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           108 RVEFEGSYENFEPERQWYPENSQS-----YKFFALSRNATNSDNKFIVLENNGVVDKSLN 162

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (I), of Ehrlichia canis. (I), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting B. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAUS6100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention. (Updated on 07-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ehrlichia canis infection; vaccine; serodiagnostic; p28; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MNYKRFVVGVTLSTFVFFLSDGAF----SDANFSEGRRGLYIGSQYKVGIPNFSAFSA

The invention relates to an isolated polynucleotide encoding a variant of the outer membrane protein (OMP) P30 of Ehrlichia canis, an outer membrane protein of E. canis, or an antigenic fragment of the E. canis P30 protein, or comprising a sequence which is the complement of canis and B. chaffeenis and E. chaffeenis outer membrane proteins and their encoding nucleic acids. The polynucleotide 672 of ADA09764. Also disclosed are E. E. chaffeenis outer membrane proteins and their encoding nucleic acids. The polynucleotide protein, for designing hybridiation probes for isolating and identifying CDNA and genomic clones encoding the OMP) or its allelic forms, for designing primers for PCR. The polypeptides encoded by the polynucleotide is useful for diagnosing human ehrlichiosis (Rocky mountain spotted fever) or canine ehrlichiosis. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Bhrlichia canis or Bhrlichia chaffeensis used in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with B. chaffeensis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11;

The E. chaffeensis proteins form part of the OMP family and consist of proteins OMP-1. -1(B to Z) shown in AAX06943-958. The E. canis proteins form part of the P30 family and consist of proteins shown in AAX06959-970. The proteins and genes are used to detect E. chaffeensis in patients and E. canis in dogs. (Updated
                                                                                                                                                                                                                                                                                                     9
useful in preparing a composition for diagnosing, treating or preventing an infection with Ehrlichia canis or Ehrlichia chaffeensis. The present sequence is the Erlichia chaffeensis OMP protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel outer membrane proteins from Ehrlichia chaffeensis and Ehrlichia

The invention relates to an isolated polynucleotide encoding an outer membrane protein (OMP) of Ehrlichia canis or Ehrlichia chaffeensis used in the diagnosis of infection. An infection such as human ehrlichiosis or canine ehrlichiosis can be diagnosed by providing a serum sample from the patient, providing a polypeptide or mixture of polypeptides, contacting the sample with the polypeptide and assaying for the formation of a complex between antibodies in the serum sample and the polypeptide, where formation of a complex is indicative of infection with E. chaffeensis. This sequence represents an Ehrlichia outer membrane protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proteins (P28-1 to P28-21) of Ehrlichiā chaffeensis. P28 proteins are encoded by a 28kDa outer membrane protein multigene family. P28 proteins are useful as a vaccine against E.Chaffeensis. DNA encoding P28 is useful for transfecting a host cell. AAU73420 represent Ehrlichia chaffeensis P28 outer membrane proteins of the invention

Sequence 41, Application US/09811007A

Patent No. 6660269

GENERAL INFORMATION:

APPLICANT: Walker, David H.

APPLICANT: Walker, Jere W.

APPLICANT: Yu, Xue-Jie

TITLE OF INVENTION: Homologous 28-kilodalton Immunodominant Protein

TITLE OF INVENTION: Genes of Ehrlichia canis and Uses Thereof

TITLE OF INVENTION: 2001-10-23

CURRENT APPLICATION NUMBER: US/09/811,007A

CURRENT APPLICATION NUMBER: 09/660,587

PRIOR APPLICATION NUMBER: 09/660,587

NUMBER OF SEQ ID NOS: 46

SEQ ID NO 41

LENGTH: 840

Immunodominant major outer membrane proteins of Ehrlichia
Chaffeensis are encoded by a polymorphic multigene family
112-139 (1998)
                                                                                                                                                            2 (bases 1 to 27190)
